Dear Authors,

It's my pleasure to inform you that, after the peer review your paper entitled:

"Management of superficial ranula with marsupialization technique: A case report"

"Andries Pascawinata*, Hamdy Lisfrizal"

Has been ACCEPTED and will publish in *Journal of Dentomaxillofacial Science* (e-ISSN 2503-0825; print ISSN 2503-0817) Article in Press.

Thank you for submitting your manuscript to the *Journal of Dentomaxillofacial Science*. I believe that our collaboration will help to accelerate the global knowledge creation and sharing one step further.

Please do not hesitate to contact me if you have any further questions.

Sincerely,
Muhammad Ruslin

Chief in Editor

Management of superficial ranula with marsupialization technique: A case report

Andries Pascawinata,* Hamdy Lisfrizal

Abstract

Objective: Ranulas are cystic fluid-filled cavities caused by extravasation of the sublingual glands on the floor of the mouth.

Case Report: A 31-year-old woman complained of swelling beneath her left tongue that had developed during the previous month. Examination revealed that the swollen area was 2 cm in diameter, long, soft, and bluesy. This case was treated with the marsupializa-

tion technique.

Results: The biopsy indicates that the lesion is a ranula. After two weeks of observation, no complications or recurrences occurred after treatment.

Conclusion: The superficial ranula was successfully treated with marsupialization procedures without complications or recurrences.

Keywords : Ranula, Marsupialization
DOI : [10.15562/jdmfs.v8i3.1607](https://doi.org/10.15562/jdmfs.v8i3.1607)

Introduction

Ranulas are rare, benign, congenital, or acquired extravasated mucocoeles (pseudocysts) that are usually located in the area above the mylohyoid muscle (sublingual ranula) or the submandibular space

excision of ranulas with or without excision of the sublingual gland.²
